

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

standing Waters. In a small breeding Pond nigh my House, where I had formerly plenty of small Carp and Tench every Year, and of late scarce any young Breed to be met with, my Gardener not long ago observed one of the *Squilla*, with a Carp in its Mouth almost as large as itself; and has since observed these Insects hunting amongst the Weeds, and vigorously pursuing the small Fry. I order'd the Gardener to catch some of these Insects, and bring them home alive, with some of the smallest Fish he could meet with. We put them together in a large Bason of Water. The Insects were so rapacious, that they fell upon the Fish immediately, and destroy'd several in my Sight; and before Morning had devoured all that were in the Bason.

North-Bierley,
Sept. 5, 1733.

RICHARD RICHARDSON.

III. *Schema Eclipseos Solaris paulo ante solis occasum observata, Vitembergæ Saxonum Die 11^{do} Maii Stil. veter. A. Chr. CIO IO CC XXXIII. A Joh. Frider. Weidlero LL. D. Mathem. Superior. Prof. Ordin. R. S. S.*

1. Circulus in Tabulâ annexâ delineatus refert imaginem folis, ea magnitudine, qua in helioscopii fundo fuit depiâta.

2. Lumen folis, prope lunæ orbem, quod nunquam non in aliis Eclipsibus solaribus tam prope horizontem, quam sub majore altitudine visis vehementi motu & undulatione gaudere animadverti, in hoc deliquio quietum prorsus & tranquillum fuit.

3. Orbis lunæ, in primis quoad partem occiduam, in phasibus paulo ante Solis occasum notatis, asperitatem manifestam, omnibus hujus phænomeni spectatoribus, prodidit; erant tamen intervalla, quibus ju-
ga

ga montium lunarium distinguebantur, nec lata admodum nec profunda. Adhibita scala subtiliter divisa, æstimavi profunditatem unius vallis $\frac{1}{200}$ five partem ducentessimam diametri lunæ.

4. Ultimæ phases decrecentes per tenues nubes visæ fuerunt, neque tamen ultra undecim disci solis uncias nobis luna occultavit.

5. Centri solis occasus pro horizonte Vitembergensi calculo tum fuerat repertus, $7^h. 39^m. 49^s$ adeoque refractione radiorum in nubibus horizontis prope modum sex minutis fuit retardatus.
